

Simple Linear Regression Results

Beta1: 597.839

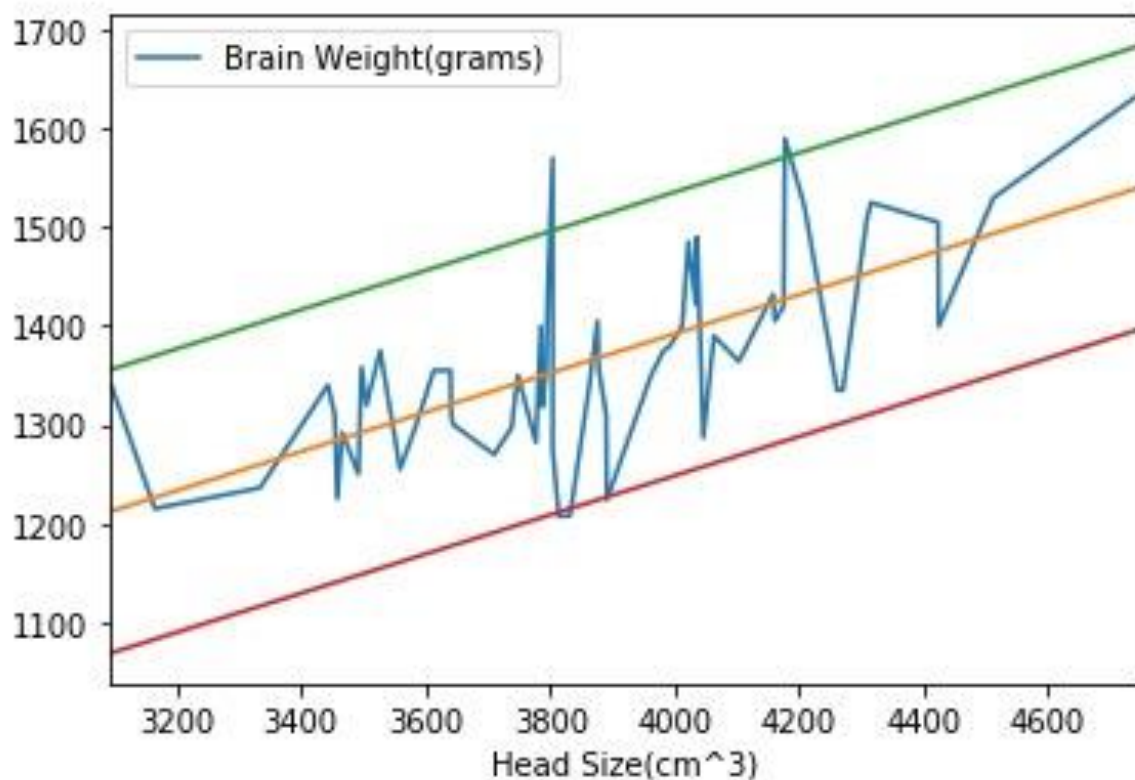

Beta2: 0.199

Standard error: 73.265

Linear Regression Line: $1212.329 + 0.199 * x$

Upper 0.95 interval line (+2std): $1355.928 + 0.199 * x$

Lower 0.95 interval line (-2std): $1068.73 + 0.199 * x$

Hypothesis: There should be a relationship between brain weight and head size. A research I wanted to conduct while surfing on GitHub and looking for some relevant data.

Although brain weight has nothing to do with intelligence scores, according to my data analysis; people who have larger head size have heavier brains.
